

VINIT TEXTILES

SAREES THAT CELEBRATE INDIAN NAREE

E-Commerce Website Client Requirement & Information Checklist

Everything we need from you to build the store — collected once, properly.

Prepared for: Vinit Textiles

Prepared by: Sanchit Jha — Sutravya.Ai

Document: Requirement Gathering (Discovery Phase)

Version: 1.0 | **Date:** 21 August 2026

00 How To Use This Document

This is a checklist, not a contract. Every item below is something the website will need before it can go live. The more of it you can give us up front, the faster and cleaner the build will be — and the fewer surprises later.

Priority	Meaning
Blocker	We cannot start or cannot launch without this. Needed first.
Needed	Required before go-live, but the build can begin without it.
Optional	Nice to have, or can be added in a later phase.

Suggested approach: Go through Sections 1–5 in our first call together (about 45 minutes). Sections 6–13 can be filled in over the following week. Appendix A (the product data sheet) is the single biggest task on your side — it is worth starting it immediately, in parallel with the design work.

The three things that decide the whole project

- 1. **Is this retail (to customers) or wholesale (to shops/resellers) — or both?** This changes pricing, minimum order rules, login requirements and the entire catalogue structure.
- 2. **How many sarees will be listed at launch, and do photos already exist for all of them?**
- 3. **Who inside Vinit Textiles will own the website day-to-day after launch?**

01 Business & Brand Basics

The foundation. Most of this appears on the website itself, on invoices, or in the legal pages.

1.1 Company details **Blocker**

- ☐ Registered legal name of the business (as on GST certificate)
- ☐ Trade / display name to use on the site — confirm: "Vinit Textiles"
- ☐ Business type — Proprietorship / Partnership / LLP / Pvt Ltd
- ☐ Full registered address with pincode
- ☐ Warehouse / dispatch address, if different from the registered address
- ☐ GSTIN
- ☐ PAN of the business
- ☐ Any other registrations to display — MSME/Udyam, Silk Mark, Handloom Mark, ISO

1.2 Contact details that will be public **Blocker**

- ☐ Customer support phone number(s) — and the hours they are answered
- ☐ WhatsApp Business number (this is usually the highest-converting channel for saree sales)
- ☐ Support email address (e.g. care@vinittextiles.com)
- ☐ Orders / sales email address, if separate
- ☐ Google Maps location link, if you want a shop location shown

1.3 Brand identity **Needed**

- ☐ Logo in high-resolution PNG with transparent background (*we currently have a JPEG/PNG on dark background — we need the original file*)
- ☐ Logo source file if available — AI, PSD, CDR, SVG, or Figma
- ☐ Confirm brand colours. From your logo we read: deep maroon **#5C0A2E**, gold **#C9A227**, wine background **#2E0616**
- ☐ Favicon / app icon version of the logo (square, works at very small size)
- ☐ Approved tagline — confirm: "Sarees That Celebrate Indian Naree"
- ☐ Preferred fonts, if the brand already uses specific ones
- ☐ Any existing print catalogue, visiting card or packaging design to match

Please note about the logo: the current logo appears to be AI-generated and the small text ("TEXTILES", the tagline) has slightly irregular letter spacing. At website header size this may look unpolished, and it will print badly on packaging. We recommend having it redrawn cleanly as a vector file. We can quote for this separately — it is a small job but it affects everything downstream.

1.4 Brand story content **Optional but valuable**

- ☐ About Us — how the business started, how many years in the trade, family history
- ☐ Where your sarees are sourced or woven (Surat, Banaras, Kanchipuram, etc.)
- ☐ Photos of the shop, the loom, the team, or the packing process
- ☐ Any press coverage, awards or notable clients

02 Business Model — Retail, Wholesale or Both

This is the single most important decision in the project. Please answer this before anything else.

Question	Why it matters
Retail (D2C) Selling single sarees to end customers	Standard cart and checkout, prices shown publicly, COD and online payment, single-piece shipping, returns policy needed.
Wholesale (B2B) Selling to shops, boutiques and resellers	Prices hidden until login, minimum order quantity, full-catalogue/set buying, per-piece rate vs set rate, dealer approval flow, transport (LR/Bilty) instead of courier, credit terms.
Both	Two price lists on the same product, customer type detection at login, and separate shipping and tax handling. Doable, but it roughly adds 30-40% to the build.

2.1 If wholesale is involved Blocker if applicable

- ☐ Minimum order value or minimum piece count
- ☐ Do you sell by **single piece**, or only by **full set / full catalogue** (e.g. 8 pieces per design)?
- ☐ Should a design be sold in "multiples of X" only?
- ☐ Are wholesale rates visible publicly, or only after login and approval?
- ☐ Do dealers need GSTIN verification before approval?
- ☐ Different price tiers by volume? (e.g. 10-49 pcs = one rate, 50+ = another)
- ☐ Do you offer credit / part payment, or is it full payment upfront?

Our observation: the sample product images you shared are laid out as a multi-angle catalogue plate with a folded-fabric shot — the format typically used for wholesale catalogues in the Surat market. If the plan is D2C retail, these composite plates will need to be split into individual images (see Section 5). Please tell us which way this is going.

03 Product Catalogue & Data

A saree store lives or dies on catalogue quality. Customers cannot touch the fabric, so the written detail has to do that job. Incomplete product data is the number one reason saree stores get returns and abandoned carts.

3.1 Scale Blocker

- ☐ How many sarees will be listed **at launch**?
- ☐ How many new designs do you add per month?
- ☐ Do you sell anything besides sarees — lehengas, kurtis, dress material, dupattas, blouse pieces?
- ☐ Who will add new products after launch — your team, or us on a retainer?

3.2 Required field for every saree Blocker

The full template is in **Appendix A**. In summary, for each saree we need:

- Design / SKU code
- Product name
- Fabric (silk, cotton silk, georgette, chiffon, organza, linen, art silk...)
- Weave / craft (Banarasi, Kanjivaram, Paithani, Patola, Chanderi, Tussar, printed...)
- Work type (zari, jacquard, embroidery, sequins, digital print, handwork)
- Colour name + colour family for filtering
- Saree length & width in metres
- Blouse piece included? Yes/No
- Blouse length & whether stitched or unstitched
- Weight of the piece (needed for shipping cost)
- Border and pallu description
- Occasion tags (wedding, festive, party, daily, office)
- Wash care instructions
- HSN code

3.3 Categories and filters Needed

Tell us how you want customers to browse. A typical structure:

- ☐ By fabric — Silk / Cotton / Georgette / Organza / Linen
- ☐ By weave — Banarasi / Kanjivaram / Paithani / Patola / Chanderi
- ☐ By occasion — Bridal / Wedding / Festive / Party / Daily wear
- ☐ By price range
- ☐ By colour
- ☐ Curated collections — New Arrivals, Best Sellers, Festive Edit, Under ₹2,000, Sale
- ☐ Do you want a "Shop by Colour" visual grid? (*works very well for sarees*)

Colour accuracy: screens show colour differently on every device. We will add a standard disclaimer on every product page. Please confirm the exact wording you are comfortable with, since this directly affects how you handle "colour is different from photo" return requests.

04 Pricing, Tax & Offers

4.1 Pricing Blocker

- ☐ Selling price for each SKU
- ☐ MRP / "compare at" price, if you want to show a strikethrough discount
- ☐ Are the prices you give us **inclusive** or **exclusive** of GST?
- ☐ Currency — INR only, or do you want to sell internationally too?
- ☐ Do prices ever vary by customer or region?

4.2 Tax Blocker

- ☐ HSN code for each product category
- ☐ Applicable GST rate per category — *please confirm current rates with your CA, as textile slabs have been revised more than once. Do not rely on memory here.*
- ☐ Does the GST rate change above or below a price threshold? If so, confirm the threshold and both rates.
- ☐ Is the displayed price tax-inclusive on the storefront?
- ☐ Do you need GST-compliant invoices generated automatically? (*essential if you sell to businesses*)
- ☐ Will customers be able to enter their GSTIN at checkout to claim input credit?
- ☐ Invoice number series / prefix format you want to use

4.3 Discounts & offers Needed

- ☐ Coupon codes — flat amount and/or percentage
- ☐ First-order discount for new customers
- ☐ Free shipping above a cart value — if yes, what value?
- ☐ Buy-more-save-more / bundle offers
- ☐ Festive sale pricing (Diwali, Navratri, wedding season)
- ☐ Referral or loyalty points Optional

4.4 Value-added services Needed

These are strong revenue add-ons for a saree store — please confirm which you offer:

- ☐ Fall & pico stitching — charge, and extra days added to dispatch
- ☐ Blouse stitching to measurement — if yes, we need your full measurement form and size chart
- ☐ Ready-made blouse in standard sizes
- ☐ Gift wrapping / gift message
- ☐ Saree draping guide or video Optional

05 Photography, Video & Media

Photography is where most saree websites fail. Good product data with bad photos will not sell.

5.1 What we need per saree Blocker

Shot	Required	Notes
Full-length on model, front	Yes	The main catalogue image
Pallu / drape detail	Yes	Shows the border and pallu work
Fabric close-up	Yes	Zari, weave texture, thread quality
Back view	Recommended	Especially where the blouse design matters
Folded / flat-lay	Recommended	Shows true colour without lighting distortion
Blouse piece separately	Recommended	Customers ask for this constantly
Short video (10–20 sec)	Optional	Highest impact single addition. Shows fall and sheen.

5.2 Technical specification Blocker

- ☐ **Individual image files** — not composite collage plates. Each angle must be a separate file.
- ☐ Minimum 1500 × 2000 px, portrait, so zoom works properly
- ☐ Consistent aspect ratio across the entire catalogue (we recommend 3:4)
- ☐ Clean, consistent background — plain white or one consistent neutral tone
- ☐ Consistent lighting between shoots, so colours stay comparable
- ☐ File naming convention: **SKU_01.jpg, SKU_02.jpg** — this saves days of work at upload time
- ☐ Delivered via Google Drive, folder per SKU
- ☐ Who owns the photo rights? Confirm we are cleared to use them.

Important — about the sample you sent: the image supplied is a single composite plate containing five separate shots merged into one file. This cannot be used as-is on a product page — zoom, mobile display and image SEO all break. We need the original individual photographs. If only the composite exists, we will have to crop them, which loses resolution and looks poor at zoom. Please check whether the original shoot files are available.

Also — AI-generated model images: if any model photos are AI-generated rather than real photographs, please tell us clearly. It affects three things: (a) marketplace listings such as Amazon and Myntra have rules about this, (b) Meta ad accounts increasingly flag it, and (c) if the fabric in the render does not exactly match the fabric shipped, you carry a real returns and misrepresentation risk. We are not saying don't use them — we are saying we need to know, so we can label and handle them properly.

5.3 Other media Needed

- ☐ Homepage banner images — 3 to 5, seasonal, or we design them
- ☐ Category banner images
- ☐ Lifestyle / campaign photos for the About page
- ☐ Packaging photos (customers respond well to seeing how the saree arrives)

06 Inventory & Order Operations

6.1 Stock Blocker

- ☐ Are sarees **one-of-a-kind single pieces**, or do you stock multiple units of the same design?
- ☐ Do you want live stock tracking, or manual "in stock / sold out" toggling?
- ☐ What should happen when stock hits zero — hide the product, or show "Sold Out" with a notify-me option?
- ☐ Do you accept pre-orders or made-to-order?
- ☐ Do you use existing inventory software (Tally, Busy, Vyapar, Zoho) that should be connected?

This matters more than it sounds. If each saree is a unique single piece, the site must lock stock the moment an order is placed, or two customers will buy the same saree. That is an unpleasant phone call. Please be precise on this answer.

6.2 Order handling Needed

- ☐ Who receives new order notifications, and how — email, WhatsApp, SMS, dashboard?
- ☐ Expected order volume per day at launch, and at peak season
- ☐ Order processing time before dispatch
- ☐ Do you need a packing slip / picking list printout?
- ☐ How many staff will have admin logins, and what should each be allowed to see?
(e.g. packing staff should see orders but not revenue reports)

07 Shipping & Delivery

7.1 Coverage Blocker

- ☐ All-India delivery, or only selected states/cities?
- ☐ International shipping? If yes, which countries — and are you set up for export documentation?
- ☐ Any pincodes you refuse to serve?

7.2 Charges Blocker

- ☐ Flat rate per order / free shipping / weight-based / zone-based — which model?
- ☐ If free above a cart value, what is the threshold?
- ☐ Different charges for COD orders?
- ☐ Average weight of one packed saree (needed to calculate rates accurately)

7.3 Courier Needed

- ☐ Which courier(s) do you already use — Delhivery, Bluedart, DTDC, India Post, Shiprocket, Xpressbees?
- ☐ Do you have an existing account we can integrate, or should we set one up?
- ☐ Do you want automatic AWB generation and label printing from the admin panel?
- ☐ Should customers get an automatic tracking link by SMS/WhatsApp/email?
- ☐ Estimated delivery days — metro vs non-metro
- ☐ For wholesale: transport / LR / Bilty handling instead of courier?

08 Payments

8.1 Gateway Blocker

- ☐ Preferred payment gateway — Razorpay, PayU, Cashfree, PhonePe, CCAvenue, Stripe
- ☐ Is the account already created and KYC-approved? (*this takes 3-7 days — start it now if not*)
- ☐ Business bank account details for settlement
- ☐ Who will hold the gateway login credentials?

8.2 Methods to enable Needed

- ☐ UPI (*typically 50-60% of Indian D2C orders — treat as essential*)
- ☐ Credit / Debit cards
- ☐ Net banking
- ☐ Wallets
- ☐ EMI Optional — relevant for bridal/high-value sarees
- ☐ Cash on Delivery — **decide carefully, see below**
- ☐ Direct bank transfer / QR for wholesale buyers

On COD: COD raises conversion significantly in the Indian saree market, but RTO (return to origin) rates on COD apparel orders are high and every RTO costs you shipping both ways. Common middle path: allow COD but take a small advance (₹100-200) to confirm intent, and/or cap COD above a certain order value. We should discuss which approach fits your margins.

09 Returns, Exchange & Policies

These must be finalised in writing before launch. They are legally required, and payment gateways ask for them during onboarding.

9.1 Return policy decisions Blocker

- ☐ Do you accept returns at all? If yes, within how many days?
- ☐ Return, exchange, or store credit only?
- ☐ Who pays the return shipping?
- ☐ Condition requirements — tags intact, unworn, original packaging
- ☐ Are any items non-returnable — custom stitched blouses, sale items, fall/pico done?
- ☐ Do you require an unboxing video as proof for damage claims? (*increasingly standard, and it protects you*)
- ☐ Refund processing time and method

9.2 Policy pages to publish Blocker

- ☐ Terms & Conditions
- ☐ Privacy Policy
- ☐ Return & Refund Policy
- ☐ Shipping Policy
- ☐ Cancellation Policy

We can draft standard versions of all five pages for you based on your answers above. However — please have them reviewed by your CA or a lawyer before publishing. We write websites, not legal opinions, and these pages carry real consequences.

10 Customer Experience & Communication

10.1 Accounts Needed

- ☐ Guest checkout allowed, or account mandatory? (*guest checkout usually converts better for retail*)
- ☐ Login method — mobile OTP, email/password, Google login
- ☐ Wishlist / save for later
- ☐ Order history and re-order
- ☐ Multiple saved addresses

10.2 Notifications Needed

- ☐ Which events trigger a message — order placed, payment received, dispatched, delivered, cancelled, refunded
- ☐ Channel preference — WhatsApp / SMS / Email (*WhatsApp performs best in this market*)
- ☐ Do you have a WhatsApp Business API account, or should we set one up? (*needs Meta verification — allow time*)
- ☐ Abandoned cart recovery messages Optional

10.3 On-site support Optional

- ☐ Floating WhatsApp chat button
- ☐ Live chat widget
- ☐ "Enquire about this saree" button on product pages
- ☐ Call-back request form

10.4 Reviews & trust Needed

- ☐ Do you want customer reviews and ratings enabled?
- ☐ Should reviews with photos be allowed? (*real customer photos sell sarees extremely well*)
- ☐ Manual approval before a review goes live?
- ☐ Any existing testimonials, WhatsApp praise screenshots or Google reviews we can seed the site with?

11 Marketing, SEO & Analytics

11.1 Accounts & access Needed

- ☐ Google Analytics account — existing or new
- ☐ Google Search Console access
- ☐ Meta (Facebook/Instagram) Business Manager — needed for the Pixel and catalogue
- ☐ Instagram business account handle — for the shoppable feed on the homepage
- ☐ Google Merchant Center, if you plan to run Shopping ads
- ☐ Do you plan to run paid ads at launch? If yes, we will set up conversion tracking properly from day one.

11.2 SEO inputs Needed

- ☐ Key search phrases you want to rank for (*e.g. "Banarasi silk saree online", "wholesale sarees Surat"*)
- ☐ Your main competitor websites — the ones you want to be compared against
- ☐ Cities or regions you most want to attract customers from
- ☐ Do you want a blog section for content marketing? Optional

11.3 Other channels Optional

- ☐ Do you also sell on Amazon, Flipkart, Meesho, Myntra or Ajio? Should stock stay in sync?
- ☐ Newsletter / email marketing tool preference
- ☐ Influencer or affiliate programme plans

12 Technical Accounts & Access

12.1 Domain & hosting **Blocker**

- ☐ Is the domain already purchased? If yes, which registrar and who holds the login?
- ☐ If not, confirm the preferred domain name and 2–3 backups
- ☐ Do you have existing hosting, or should we arrange it?
- ☐ Business email setup — Google Workspace, Zoho Mail, or existing?
- ☐ Is there an existing website or Instagram shop whose content we should migrate?

Please keep domain and hosting in Vinit Textiles' own name and account. We will manage it for you, but you should own it. This protects you regardless of who builds or maintains the site in future.

12.2 Ownership & handover **Needed**

- ☐ Who is the single point of contact for approvals during the build?
- ☐ Who will be trained to use the admin panel after launch?
- ☐ Do you want a recorded video training session and a written admin manual?
- ☐ Post-launch support — do you want a monthly maintenance arrangement?

12.3 Practical constraints **Blocker**

- ☐ Target launch date — and is it tied to a festival or wedding season?
- ☐ Budget range for the build
- ☐ Budget for ongoing monthly costs (hosting, WhatsApp API, courier, gateway fees)
- ☐ Do you need multi-language support — English, Hindi, Gujarati?

13 Design Preferences

- ☐ Share 3–5 websites you like the look of — **including competitors and non-saree sites**
- ☐ Share 1–2 websites you dislike, and tell us why
- ☐ Preferred overall feel — traditional and ornate / clean and modern / luxury minimal
- ☐ Should the site lean dark (like your logo's wine background) or light with gold accents?
- ☐ Any specific homepage sections you definitely want
- ☐ Do you have a preference on how many banner/hero images rotate on the homepage?

A suggestion on direction: your logo uses deep wine and gold — a genuinely strong palette for this category. But a fully dark website makes saree colours hard to judge accurately, which drives returns. Our recommendation is a light, mostly white storefront with the maroon and gold used for the header, buttons and accents. The product photos then carry the colour. We can show you both before you decide.

A Appendix A — Product Data Sheet Template

Please fill one row per saree in a Google Sheet using exactly these columns. Getting this right in one pass saves an enormous amount of back-and-forth later. Send us a sheet with 5 rows filled first, so we can confirm the format before you do all of them.

Column	Required	Example / Notes
SKU / Design Code	Yes	VT-BAN-0142 — must be unique, never reused
Product Name	Yes	Teal Banarasi Soft Silk Saree with Golden Zari Floral Weave
Category	Yes	Silk Saree
Sub-category / Weave	Yes	Banarasi
Fabric	Yes	Soft silk / Cotton silk / Georgette
Work Type	Yes	Zari weaving, jacquard
Colour Name	Yes	Peacock Teal
Colour Family	Yes	Blue — used for filters, keep to a fixed list
Saree Length (m)	Yes	5.5
Saree Width (m)	Yes	1.06
Blouse Included	Yes	Yes / No
Blouse Length (m)	If applicable	0.80
Blouse Type	If applicable	Unstitched piece / Stitched / Running blouse
Weight (grams)	Yes	750 — packed weight, needed for shipping
Border Description	Yes	Contrast woven zari border, 4 inch
Pallu Description	Yes	Rich zari brocade pallu with floral jaal
Transparency	Recommended	Opaque / Semi-sheer / Sheer
Occasion Tags	Yes	Wedding, Festive, Reception — comma separated
Wash Care	Yes	Dry clean only
Stock Quantity	Yes	1 if single piece
Cost Price	Internal	Not shown publicly, used for reports
Selling Price	Yes	State clearly whether inclusive of GST
MRP / Compare Price	Optional	For strikethrough display
HSN Code	Yes	Confirm with your CA
GST Rate	Yes	Confirm with your CA
Image Folder Name	Yes	Must match the SKU exactly
Video File	Optional	Filename if a video exists
Short Description	Optional	One line — we can write these if you prefer
Wholesale Rate	If B2B	Per piece
Min Order Qty	If B2B	e.g. 8 pieces per design

B Appendix B — What We Need First

If nothing else, please send these seven things. They unblock the start of the project.

#	Item	Why it blocks us
1	Confirmed answer: retail, wholesale, or both	Decides the entire architecture and quote
2	Logo in original vector or high-res transparent PNG	Needed for every design screen
3	Product photos for 5 sample sarees, as individual files	Confirms photo quality before you shoot the rest
4	Appendix A sheet filled for those same 5 sarees	Confirms the data format before bulk entry
5	Total number of sarees to be listed at launch	Drives timeline and data-entry cost
6	GSTIN + business details	Needed for payment gateway onboarding, which is slow
7	Domain name decision, and target launch date	Everything schedules backwards from this

Suggested next steps

- **Step 1** — 45-minute call to walk through Sections 1 to 5 together.
- **Step 2** — You send the seven items above.
- **Step 3** — We send a firm scope, timeline and quotation based on your actual answers, not assumptions.
- **Step 4** — Design mockups for the homepage and one product page for your approval.
- **Step 5** — Build, catalogue upload, testing, then launch.

One honest note on timelines: in our experience the website build is rarely what delays a saree store launch. It is the photography and the catalogue data. Those two tasks sit with you, and they take longer than expected every single time. Please start them the same week we start the build, not after.
